

Longevity Impact Forum

And DAYS Scientific Blockchain Panel

Longevity Impact Forum for consolidation of all scientific schools in the longevity and P4 Medicine areas.

DAYS Foundation invites scientists working in longevity, anti-aging, biogerontology and related fields to submit their contribution in Longevity Impact Forum (LIF).

LIF was announced at DAYS Longevity conference in Oxford

Source: <https://www.facebook.com/groups/DAYS.EXCHANGE/permalink/1000208440127494/>

The Longevity Impact Forum will take place in Zurich, Switzerland, on February 20, 2019.

Longevity Impact Forum (LIF) is an event organized by DAYS Foundational platform, the first blockchain accelerator for longevity and anti-aging start-ups. It will be presented on the World Economic Forum in Davos.

LIF is going to serve as a platform for selection and evaluation of cutting-edge technologies in the field of the longevity, biotech, and 4P Medicine.

The goal of LIF is to validate the most promising emerging longevity technologies and develop evaluation and verification criteria for their effectiveness, safety, cost-effectiveness and other impacts.

This evaluation of technologies is going to be done by a blockchain scientific board consisting of top 100 world leading experts. The board will be elected as a result of online voting during LIF.

Specific topics of interest of Longevity Impact Forum include, but not limited to:

- Social and economic perspectives of emerging longevity technologies
- Anti-aging drugs
- Improving evidence base for anti-aging and longevity R&D
- Lifestyle and dietary interventions for healthy longevity
- Regenerative medicine for healthy longevity
- Cost-effectiveness of anti-aging and longevity R&D and 4P Medicine
- Diagnostics of age-related diseases. Biomarkers of aging.
- Integration and road-mapping for the longevity field

The first Investment Rating of longevity technologies.

The purpose of this instrument (rating system), that will be continuously adjusted and improved, will be to facilitate support and funding for truly promising longevity R&D. This instrument will assist policy makers, involved in diverse regulatory frameworks, and investors utilizing various financial instruments, including blockchain, in their practical evaluation of the emerging longevity industry.

The Longevity Impact Forum will for the first time systematically explore this question. It will showcase recent cutting edge developments in the field, covering the entire longevity space, from aging diagnostics and biomarkers, to geroprotective medications and regenerative medicine, to precision and 4P medicine, presented by leading researchers and developers in the field.

Yet, beyond demonstrating promising recent developments, the forum will uniquely explore the qualitative and quantitative criteria for the assessment of emerging longevity diagnostics and therapies, their potential and actual efficacy and safety, their evidence levels, their potential cost-effectiveness and profitability. In practical terms, the forum will aim to develop and pilot a pioneering evaluation (rating) instrument for promising longevity technologies, based on human expert ratings and rankings as well as formal AI-based expert systems.

The DAYS Blockchain Scientific Panel.

It will be the first in the world system of guarantee of potential of startups. It is similar to the system of electors at the US presidential elections: a general vote of DAYS contributors (all registered users of the site: www.days.exchange) selects the best life science experts, in areas related to anti-aging, longevity and P4 Medicine. And the elected Scientific Blockchain Panel will rate and vote for technologies and companies to be funded by the DAYS Exchange.

Finally, the DAYS Investment Blockchain panel, consisting of well-known economists and managers, approves their decision.

LIF call for papers.

DAYS.Exchange encourage academic experts to submit the applications to get LIF, with a short summary of an oral presentation
- to info@liform.org

We invite you to join this consultation to facilitate the development of longevity space, reduce fantasy valuations and unsubstantiated claims, and strengthen the weight of evidence and strategic analysis.
